

# Simplifying your cybersecurity to-do list.

Protecting a company's network is hard work—especially in financial services. There are many regulations and layers of security to navigate, and the stakes are higher to protect your clients' sensitive data and financial accounts. The right partner can make all the difference, serving as an extension of your team and providing solutions that keep you secure by anticipating, identifying and quickly managing threats.

## Control network access

### TO-DOS:

- ✓ Set access controls for different users, locations and devices
- ✓ Identify and secure ingress points against unauthorized access
- ✓ Monitor activity in your environment, whether it's on-premises or in the cloud, and define standard patterns

## Monitor traffic and endpoints

### TO-DOS:

- ✓ Classify and protect all inbound and outbound traffic regardless of user, device or location
- ✓ Use automation to detect and respond to malicious activities and potential indicators of compromise
- ✓ Establish and maintain monitoring systems across all devices accessing the network
- ✓ Monitor device activity and identify use patterns and aberrations

## Protect against attack vectors

### TO-DOS:

- ✓ Identify and inspect applications across all ports
- ✓ Determine URL trustworthiness and risk, blocking malicious sites
- ✓ Protect email inboxes against common threats like phishing, malware, data theft and account takeover
- ✓ Set patching protocol and eliminate weak points
- ✓ Establish an attack remediation protocol to identify the root cause and restore files

## Plan ongoing security management

### TO-DOS:

- ✓ Limit vendor sprawl and tech stack bloat, common in financial services
- ✓ Stay up to date with federal security regulations and implement proper safeguards like SOX, PCI-DSS, FFIEC and ISO 27001
- ✓ Explore how automation and AI can reduce manual errors and team fatigue
- ✓ Engage a SOC to support understaffed IT and security teams 24/7

Maintaining strong network security can be exhausting—leading to alert and response fatigue that can leave you exposed. That's why Crown Castle serves as an extension of your team to streamline your workload. With us in your corner, it's easier to stay compliant and keep your company, your employees and your clients secure.

Ready to connect?
