

Cyber Defense One

Data is growing at an exponential rate and so are the ways communities and businesses use it—yet cybersecurity threats continue to rise. With the continuous evolution of mission-critical applications and complex network architectures, keeping up with increasing security threats can be challenging and costly without the right network solutions and resources in place.

Our Cyber Defense One managed security solution provides you with access to real-time analysis, monitoring, threat-detection and alert notifications for suspicious activity—allowing you to stay ahead of emerging threats, protect critical network assets and quickly respond to security issues. Our best-in-class Security Operations Center (SOC) uses an AI machine learning platform to identify operational and security issues. Helping your business anticipate and analyze risk and quickly prioritize issues requiring investigation—all in a way that adds value.

Key Benefits

Visibility in real-time

Get real-time access to a portal including live dashboards and statistics and account information like orders, billing and active services.

Peace of mind

Ensure business continuity, protect your brand's reputation and maintain client trust—all while adhering to security and operational compliance.

Compliance

Your data demands the highest levels of compliance. With security monitoring and vulnerability analysis, we help you maintain federal, state and local regulations.

Expertise

Our team of security experts has decades of expertise ranging across numerous security-intensive industries. You can be sure your network is in good hands, freeing up key IT resources for other operational initiatives.

Efficiency

Reduce mean-time-to-resolution with predictive analytics to help identify unusual patterns in your data logs—uncovering security breaches much faster so you can quickly respond to advanced threats and recover from disruptions.
