Any organization conducting business over the internet is at risk of a Distributed Denial of Service (DDoS) attack, a malicious attempt to disrupt the normal traffic of a targeted server, service or network by overwhelming it with a flood of internet traffic from multiple sources. DDoS Defense uses best-in-class security technology to monitor your traffic, detect threats and alert key personnel to mitigate these disruptive and costly attacks before your business operations are impacted.

**Key Benefits**

**Business continuity**
Our low-latency solution removes malicious traffic, while allowing legitimate traffic to reach your network uninterrupted.

**Monitoring**
Our traffic monitoring and attack detection centers are staffed by security experts who proactively monitor traffic around-the-clock. They can identify anomalies and quickly respond to attacks—protecting your business-critical systems.

**Industry-leading technology**
We provide early DDoS attack detection using a best-in-class defense system and threat analysis that can respond to both new and existing attack types.

**Efficiency**
You'll get expert support and security without on-premise equipment or the need to hire security resources—keeping expenses to a minimum.

**Flexibility**
We offer immediate on-demand service if you experience an attack, as well as a proactive subscription-based option that keeps your organization protected.

NYSE S&P 500

Our Solutions

▶ Towers
▶ Small cells
▶ Dark Fiber
▶ Ethernet
▶ Wavelength
▶ Managed SD-WAN
▶ Internet Access
▶ Private Networks
▶ Colocation
▶ Cloud Connect
▶ Optical Encryption
▶ **DDoS Defense**
▶ Bandwidth on Demand
▶ Fixed Wireless
▶ Ultra-Low Latency
▶ Video Transport
